About Me

Senior Developer with over 10 years of experience. I specialize in building scalable microservice architectures for robotics and IoT. I possess a strong mathematical background, deep expertise in Motion Planning, Control Theory, and Machine Learning. I have a comprehensive understanding of the entire development cycle, from low-level hardware to distributed backend systems using C++ and Python.

Education

University: Bauman Moscow State Technical University, 2008-2014

Faculty: Special Machinery

Specialty: Special Robotics and Mechatronics

Work Experience

Company: [Kinexon](#) August 2022 - Present

Position: Senior Developer

Fleet Manager:

Responsibilities:

- Fullstack development of software for orchestrating robots according to VDA5050 standards;
- Working with microservices and optimizer (hexaly) swagger;
- Development of a service for distributing orders for mobile robots;

Stack: Python, JavaScript, PostgreSQL, HTML, CSS, Vue, FastApi, Bootstrap

Website: <https://kinexon.com/products/kinexon-fleet-manager>

KinexonOS:

Responsibilities:

- Software development for enterprise IoT systems (mqtt, kafka, tcp, etc.);
- Working with multithreaded processes;
- Development of scalable systems (microservices + Kafka);

Stack: C++, PostgreSQL, Kafka, Docker, Python, grafana, prometheus, shell script

Website: <https://kinexon.com/products/kinexon-operating-system>

Skills

- **Languages & Frontend:**
C++, Python, Golang, JavaScript, Vue, HTML, CSS
- **Backend & Data:**
SQL, PostgreSQL, FastAPI, Kafka
- **DevOps & Tools:**
Linux, Docker, ROS2, Git, Prometheus, Grafana
- **ML & AI:**
TensorFlow, PyTorch, Keras, Scikit-learn, Reinforcement Learning, CNN, RNN, LSTM, BERT, Word2Vec, NLP, Classical ML
- **Math & Other:**
Motion Planning, Control Theory, Linear Algebra, Probability Theory, Statistics, Combinatorics, Matlab

Company: SberAutoTech January 2021 - August 2022

Position: Lead Software Engineer

Responsibilities:

- Development within the Planning team (motion planning);
- Working with various map formats (osm, GeoJson, csv, etc.);

Stack: C++, Python, ROS2, Gazebo, Carla, Docker.

Website: <https://sberautotech.ru>

Company: ABBYY October 2019 - January 2021

Position: Software Developer

Responsibilities:

- Development in the DAForms team for the FlexiCapture document management system;
- Working with machine learning algorithms for form analysis;

Stack: C++, Python.

Website: <https://www.abbyy.com/flexicapture>

Company: Ride Terralink Research October 2012 - October 2019

Position: Software and Hardware Developer

Responsibilities:

- Development of UAV control and stabilization algorithms;
- Design of circuit diagrams and PCBs for UAVs;
- Development of UAV software. The software was based on PX4 autopilot with NuttX RTOS;
- Development of mathematical models for UAV components;
- Development of drivers for UAV components (sensors, servos, etc.);

Stack: C++, Python, Matlab, AutoCAD, Altium Designer.

/

Languages

English: Advanced

German: Intermediate

Spanish: Elementary

/

Courses

- **Coursera** Machine Learning and Data Analysis Specialization;
- **Coursera** C++ Development Basics Specialization;
- **Udemy** The Complete 2023 Web Development Bootcamp;

/

Hobbies
